

8-year old having Fatal Kidney Disease gets a new life at MindHeal Homeopathy

Eight-year old Bhavesh was brought in a very serious condition to MindHeal Homeopathy for treatment. He was suffering from Renal Artery Stenosis, a fatal kidney disease which had also caused stoppage of his urine and high blood pressure. He was in such a state that any delay in treatment could have caused kidney failure and eventually death.

He was initially admitted in a hospital where he was given 17 injections per day, the cost of one being nothing less than Rs 150. As Bhavesh's family could not afford further treatment, they got him discharged. However, his condition worsened at home. He became weak, stopped reacting to anything, his blood pressure rose even more and the medications given to him led to swelling in his entire body. He found it difficult to eat solid foods and was able to take only fluids. There seemed very little hope of his survival.

Through a detailed case analysis, we found out that Bhavesh had no father, but was very attached to his uncle. One day, when he saw his uncle die due to cardiac arrest, he went in a state of shock. This shock resulted in a spasm in his renal artery which was the main cause of his Renal Artery Stenosis. Few days later, his urine stopped, his appetite lowered and he discontinued going to school and playing outdoors. Hence, he had to be admitted.

With the appropriate homeopathic medicines prescribed by the treating doctor at MindHeal Homeopathy, the spasm that caused the Renal Artery Stenosis was reversed back. His appetite returned within two days of starting treatment with us. Within some more days, his swelling subsided, his blood pressure normalized and his fatal disease was uprooted. He even started pestering his mother to allow him to play outdoors! Thanks to his treatment at MindHeal Homeopathy, Bhavesh got a new lease of life.
